|--|
| Specimens were not exposed to air circulating oven.                                |

TEST SCOPE: This test method provides a method of determining the flammability characteristics of textile products when exposed to an ignition source in a laboratory

environment. Eight specimens were taken from the sample lot, 230mm X 230mm, and preconditioned in an air circulating oven @ 150°C for 2 hours. After removal from the oven, the specimens are placed into a desiccator for 1 hour prior to performing the test. Each specimen was then placed into the test chamber floor with the pile surface up and a steel frame, 230mm X 230mm with 200mm diameter hole, placed on top of the specimen. A methenamine tablet was placed

centrically onto the pile surface. The pill was ignited using a lighted match, with the ignition flame and propagated flame allowed to self-extinguish.

The specimen passes, if the charred portion of the test specimen, did not extend to within 25mm (1") of the diameter hole of the steel frame. The U.S. Consumer

Product Safety Commission requires that at least seven of the eight specimens pass the test for acceptance as meeting the standard.

### TEST SUMMARY:

CRITERIA:

| TEST METHOD   | TEST DESCRIPTION  | TEST RESULT     |   |  |
|---------------|---|-----------------|---|--|
| ASTM D2859-16 | Ignition Characteristics of Textile Floor Coverings (Pill Test) | 8 out of 8 Pass | Passes, U.S. CPSC 16CFR 1630 (FF1-70), Carpets & Rugs |  |

#### PROCEDURE:

This test method determines the rainfall drainage capacity (permeability) of the playing surface. Test data values represent drainage rates vertically thru the turf with infill listed above, and do not take into account the percolation properties of a pad and/or an underlying sub base. Three specimens, 11.5" diameter, were cut from the 15' turf roll, side-center-side manner. Each turf specimen was securely fastened to the permeability tube using mechanical flanges, ensuring vertical water flow thru the product. Water was pumped into the tube faster than could exit, until the water level reached 6". The water source was shut off, allowing the accumulated 6" water level to recede. The recede was timed via stopwatch until the water level exited the turf. The flow time was recorded in seconds. This procedure was repeated a total of 4 times where, the first pass was for conditioning, with passes 2,3,4 used for averaging. This process was repeated on the remaining specimens.

## TEST SUMMARY:

| Specimen # | Drainage (Seconds) | gal/min/yd² | Rainfall Capacity (inches/hour) |
|------------|--------------------|-------------|---------------------------------|
| 1          | 46.9               | 43.1        | 132.2                           |

| TEST METHOD                  | TEST DESCRIPTION                           | TEST RESULTS | ACCEPTABLE LEVEL PER TEST METHOD |
|------------------------------|--|--------------|----------------------------------|
| ASTM F2765 / EPA 3052 / 6010 | Total Lead Content digested by 3052 @210°C | <0.5 mg/Kg   | <300 mg/Kg                       |

Under NVLAP guidelines, TS is to report any outsourcing of testing to another laboratory facility. In the above testing, some/all of tests were outsourced to: Analytical Industrial Research Laboratories. Their accreditations are on file and available upon request.

<u>Uncertainty.</u>
We undertake all assignments for our clients on a best effort basis. Our findings and judgments are based on the information to us using the latest test methods available.

TSI can only ensure the test results for the specific items tested.

Unless otherwise noted in the deviations sections of this report, all tests are performed in compliance with stated test method.

#### Test Report Approval:

Erle Miles, III, Lab Director Testing Services (TSI) LLC

TSi Accreditation

Our laboratory is accredited by the US Dept. of Commerce, National Institute of Standards and Technology. ISO/IEC 17025;2005. Our code # is: NVLAP 100108-0 TSi is an Organizational Member of ASTM (American Society for Testing and Materials). TSi is a certified independent testing laboratory by the STC (Synthetic Turf Council).

## TEST MATERIAL:

| Date Material Received: | April 14, 2020                |
|-------------------------|-------------------------------|
| Material Type:          | Synthetic Turf                |
| Material Condition:     | Excellent, New                |
| Material ID:            | Elite Optimum Flow Turf Rolls |

### **TESTING METHODS REQUESTED:**

| Testing Services Inc. was instructed by the client to test for the following |   |  |  |  |
|--|---|--|--|--|
| Standard:  | Standard: ASTM G154 Test Method: Standard Practice for Operating Fluorescent Light Apparatus for UV Exposure of Non-Metallic Material |  |  |  |

### **SAMPLING PLAN:**

Sampling Date: 4/14/2020

- Specimen sampling is performed in the sampling department at TSI.
- The sampling size of specimens is determined by the test method requirements.
- In the event a specific sampling size is not called for, a determination will be made based on previous testing experience, and approved for use by an authorized manager.

  All samples are subjected to the outside environmental conditions of temperature and relative humidly.
- Sample requiring pre-determined exposure to specified environmental conditions based on a specific test method, take place in the departments in which they are tested

#### **DEVIATION FROM TEST METHOD:**

| BEVIATION FROM TEST METHOD.  |  |  |
|--|--|--|
| State reason for any Deviation from, Additions to, or Exclusions From Test Method. |  |  |
| None   |  |  |

| Standard:  | EN 15336        | Test Method: | Surface for Sports Area, Exposure for Synthetic Turf to Simulated Wear (LiSport) |  |  |  |

### **SAMPLING PLAN:**

Sampling Date: 4/14/2020

- Specimen sampling is performed in the sampling department at TSI.
- The sampling size of specimens is determined by the test method requirements.
- In the event a specific sampling size is not called for, a determination will be made based on previous testing experience, and approved for use by an authorized manager.
- All samples are subjected to the outside environmental conditions of temperature and relative humidly.
- . Sample requiring pre-determined exposure to specified environmental conditions based on a specific test method, take place in the departments in which they are tested

#### **TEST EQUIPMENT:**

| Wear Tester: | Deltec Manual 1.2m LiSport |  |
|--------------|----------------------------|--|
| Model #:     | Y2017 1701003              |  |
| Date of Mfg: | 1/2017                     |  |
| Dimensions:  | 3070mm X 1300mm            |  |

#### PRINCIPLE:

This procedure simulates high levels of athletic use of the synthetic turf in an accelerated period of time under laboratory conditions. Two studded rollers were traversed to and fro over the infilled turf to produce mechanical action of the surface that occurs during normal use. This report details the effects of this mechanical action as it relates to degradation of the pile fiber.

The client, Artificial Grass Liquidators, commissioned TS to evaluate simulated wear of submitted finished synthetic turf, referenced above, with the use of an infill system.

The results are indicative of mechanical wear only and do not take into account the effects of weathering, uv degradation, or use of the turf outside of competition.

## PROCEDURE:

A test specimen, 560mm X 2438mm, was cut from the sample lot to be exposed to mechanical abrasion. The specimen was infilled with above listed infill. The rollers were positioned onto the surface of the system, with the pressure set automatically @ 1kg per cm. All speeds of the machine components were set in accordance with FIFA & CEN standards. The design of the machine ensures that the studs do not repeatedly impact the same spots.

The Lisport was activated for 1,000 cycles. At the end of the 1,000 cycles the pile fiber degradation was graded, a photo and fiber sample were taken.

#### DEVIATION FROM TEST METHOD:

Report Date:

August 13, 2020

FIFA Section 17, EN 15336 Simulated Abrasion, Lisport

www.testingservices-usa.com • (706)226-1400 office@testingservices-usa.com

## TEST MATERIAL:

| Date Material Received:    | April 14, 2020<br>Synthetic Turf                        |  |  |
|----------------------------|---|--|--|
| Material Type:             |   |  |  |
| Material Condition:        | Excellent, New  |  |  |
| Material ID:               | MANAGE PROPERTY AND |  |  |
| Infill:                    | 16 Grit Sand, to ¾" exposed tuft                        |  |  |
| Measured Tuft Height:      | 51mm  |  |  |
| Average Infill Depth:      | 32mm  |  |  |
| Exposed Tuft Above Infill: | 19mm  |  |  |

### **TEST RESULTS:**

- A scale of 1 to 5 was used for descriptive evaluation of the pile fibers due to the effect of mechanical wear (Lisport) at each 1,000 cycle interval.
- The following is an explanation of the scale:

| Rating | Description        |  |
|--------|--------------------|--|
| 1.0    | None or Negligible |  |
| 2.0    | Slight             |  |
| 3.0    | Moderate           |  |
| 4.0    | Considerable       |  |
| 5.0    | Severe             |  |

The following was rated using the referenced rating scale: tuft loss, pile flattening, fiber splitting, and infill dispersion.

| # of Cycles | Infill Dispersion | Tuft Loss | Pile Flattening | Fiber Splitting |
|-------------|-------------------|-----------|-----------------|-----------------|
| 1,000       | 1.0               | 1.0       | 2.5             | 1.0             |

CONCLUSION:

Photographs of the overall view of the fibers are provided in the following appendixes.

Infill dispersion, tuft loss and fiber splitting was negligible for the entire test duration. Pile flattening was very moderate.

### APPENDIX A: Camera and Microscopic View of Fibers
